

FORS Approved Training

Silver requirement S5

Work Related Road Risk training for car drivers

FORS Bronze requirement D4, Silver requirement S5 and Gold requirement G5 require FORS operators to demonstrate driver competence through FORS Professional Development and the mandatory training requirements listed at Annex 1.

Specifically, at FORS Silver this means undertaking mandatory Work-Related Road Risk (WRRR) training that includes managing road risk and the safety of vulnerable road users.

FORS Standard version 5 Annex 1.4 outlines the FORS Professional Development requirements for car drivers. At FORS this requires a FORS Approved WRRR training course to be completed within the past five years.

FORS Approved status

There are two routes for organisations to achieve FORS Approved status for car fleet drivers, these are:

1. Assessed approval

FORS Approved - WRRR training courses for car drivers are submitted and assessed as having met the training objectives and learning points outlined below:

Training objectives	Learning points
Check a vehicle to ensure its roadworthiness	 Including basic safety checks, safe loading and legal documentation
Know the fitness and health requirements for driving	 Including impairment through drugs, alcohol, illness, fatigue and poor vision
Know the distractions that can affect driving standards	 Including in-vehicle technology such mobile phones and navigation devices and other activities that affect concentration
Interact safely with other road users	 Including vulnerable road user safety such as pedestrians, cyclists and motorcyclists
Apply defensive driving skills	 Including concentration, anticipation, observation and hazard perception
Drive on all road types	 Including speed and risks on motorways, dual carriageways, rural roads and urban roads
Drive in adverse weather conditions	 Including preparation and route planning and driving in rain, snow, ice and fog
Drive during darkness	 Including lighting, vision, fatigue and the increased risks of driving at night

WRRR training courses for car drivers may be combined with environmental awareness training on reducing fuel consumption and vehicle emissions to meet Gold requirement G5.

2. Automatic approval

Due to their widespread use and recognition in the fleet sector, the following courses are considered automatically FORS Approved for Silver requirement S5:

- DVSA Pass Plus
- RoSPA Advanced Driver
- IAM RoadSmart Advanced Driver
- Smith System Driver Direct

Automatic approval is reviewed annually by FORS and is dependent on the courses being continually acceptance by FORS operators, alignment to the FORS Standard and the FORS Approved - WRRR approval criteria.

3. Attaining course approval

Training providers seeking to attain FORS Approved status for WRRR training courses for car drivers to meet FORS Silver S5 requirement should check the FORS Professional training 'Guidance for training providers and FORS operators' here for details of how and where to send the application.

The application should clearly demonstrate how the training course meets the specific WRRR training objectives for car drivers.
